Structural elements of the full paper

These elements of the paper (article) structure are <u>obligatory</u>:

- **Abstract** (Should contain the major objective, the research design, the methods and procedures employed, the main outcomes and results, the conclusions from data and results, implications for further research. In abstract, please, use past tense sentences, and don't be afraid to use passive voice if necessary.);

- **Introduction** (Should provide wider context, substantiation of the need of writing and publishing the paper, and its goal.);

- **Literature review** (At least 5 positions in the literature form <u>Web of Science</u> or <u>Scopus</u> database should be included.);

- **Methodology of the research** (Should contain detailed description of the methods applied, selection criteria, study period, justifications for model (if applicable). This part is obligatory even for <u>theoretical articles</u>.);

- **Results** (Should explain how the results differ from other authors/studies, and how the results contribute to body of knowledge.);

- **Conclusion** (Should contain evaluation and exact description of achieved results provide a confrontation of the achieved results with previously published papers, author's opinion of established differences, his/her attitude to the results. Also indicate advantages, limitations, and possible applications.);

- **References** (references should be cited using the Harvard system. List all references numbered and in alphabetical order. Web of Science and Scopus references are also required. DOI numbers – if any – should also be indicated.)
